

QUALITY TUNGSTEN CARBIDE SPRAY TIPS

EXITFLEX proudly offers a wide assortment of styles and sizes of Tungsten Carbide Spray Tips. Each tip is carefully manufactured to our rigid standards and tested to assure its quality.

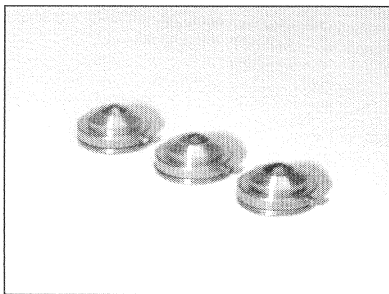

Industrial Grade Airless Flat Tips

The Industrial Grade tip is cut, tested and mounted in a highly polished stainless steel jacket.

Surface Finish Airless Tips

The Surface Finish tip incorporates a primary fixed orifice with a removable pre-orifice. The tip body is made from stainless steel with a black cobalt overlay. The tip allows for atomization of coatings at substantially less pressure than conventional tips.

Air Assisted Airless Tips

The Air Assisted Tip is manufactured in a wide variety of designs to match most air-assisted spray guns. The tip is suitable for use with conventional and electrostatic applications.

Please indicate tip type, spray angle and orifice size when ordering. For example, **I-517** would represent an Industrial tip, spray angle of 50° and an orifice size of .017.
